

FOR IMMEDIATE RELEASE:

Acon Digital Restoration Suite Released – First Aid Kit for Noisy Recordings

Oslo, April 22nd, 2013 – Hiss, hum, clicks, crackle and clipping effectively destroy any listening pleasure – and the human ear is very sensitive. Either you are struggling with noisy recordings in new productions or dealing with noise from old treasures originating from LPs, cassettes or tapes – with the introduction of the new Restoration Suite, Acon Digital brings a plug-in collection to the market that allows seasoned audio engineers as well as beginners to quickly achieve excellent results. The plug-ins efficiently suppress noise with minimal impact on the source material. In order to use the plug-ins, a VST or AU compatible host application is required.

Restoration Suite is the result of years of research and development within the field of noise reduction and audio processing. It includes the tools DeNoise for broadband noise reduction, DeHum to filter out hum and buzz noise, DeClick to remove typical pops and crackles from vinyl and 78 RPM recordings as well as DeClip to reconstruct clipped peaks.

Acon Digital Restoration Suite is available for both Windows (PC) and OSX (Macintosh) for \$99.90 (USD) at acondigital.com.

"For the first time, we break out of the Windows world and release software for the Macintosh platform" says Stian Aagedal, managing director and chief developer at Acon AS, noticeably pleased with the technological leap achieved by the audio specialists from Norway. "We feel confident that the new plug-in suite will receive considerable interest in this growing and quality aware market, primarily because of the streamlined workflow and excellent audio quality".

About Acon AS

Acon AS was established in 1987 and offers products and consulting services with a strong focus on digital signal processing and audio processing. The company offers high-quality software for digital audio editing, audio restoration and mastering. Acon AS took over the audio editing and processing product line from the German company Acon Digital Media GmbH on January 1, 2012. Acon AS will continue to develop and support these products in the future.
